1 Introduction

This document describes errata and clarifications for the TCG PC Client Platform TPM Profile for TPM 2.0 v1.05 revision 13 as published. The information in this document is likely – but not certain – to be incorporated into a future version of the specification. Suggested fixes proposed in this document may be modified before being published in a later TCG Specification. Therefore, the contents of this document are not normative and only become normative when included in an updated version of the published specification. Note that since the errata in this document are non-normative, the patent licensing rights granted by Section 16.4 of the Bylaws do not apply.

2 Errata

2.1 Errata 1 Table 1 TPM_PT_NV_COUNTERS_MAX

The TPM Library Specification allows the TPM to report a value of 0 for this property type when there is no fixed minimum and the number of counters that can be defined is determined by the available NV memory pool. The PTP requires a minimum value of 6, which contradicts the TPM Library Specification. A value of 0 is also permissible.
