1 Introduction

This document describes errata and clarifications for the TCG Platform Certificate Profile; Specification Version 1.1; Specification Revision 19 as published. The information in this document is likely – but not certain – to be incorporated into a future version of the specification. Suggested fixes proposed in this document may be modified before being published in a later TCG Specification. Therefore, the contents of this document are not normative and only become normative when included in an updated version of the published specification. Note that since the errata in this document are non-normative, the patent licensing rights granted by Section 16.4 of the Bylaws do not apply.

2 Clarifications

The following clarifications will help readers in understanding the specification.

2.1 Clarification 1:

Table 3: Attribute Certificate Format Fields

Current:

Field Name	RFC 5755 Type	Value	Field Status
Holder	Holder	Identity of the associated TPM EK Certificate, use BaseCertificateID. Additional EK Certificates can be referenced using the TargetingInformation extension.	Standard

Clarification:

In order to encode the TPM EK Certificate information in the Platform Certificate's Holder field, the issuer must use the baseCertificateID option as defined in RFC5755. The TPM EK certificate's Issuer and Serial number must be included in the baseCertificateID.

2.2 Clarification 2:

Section A. Certificate Examples

Clarification:

This section contains informative examples of Platform Certificates and Delta Platform Certificates. The values included in the certificate are for illustrative purposes only. Implementers should replace values such as dates, specification versions, and others with actual values.
